*KNOWLEDGE ABOUT DENTAL CARIES USING DENTAL MONOPOLY MEDIA IN 4TH AND 5TH GRADE STUDENTS OF SDN BULU KEC. SUGIHWARAS BOJONEGORO*

*xvi+50 Page+9 Table+11 Attachment*

*Dental health in school-age children, especially at the primary school level, plays a very important role. The predominant oral health issue encountered by children at a young age is dental caries. Based on preliminary data at SDN Bulu, as many as 8 out of 10 students (80%) have dental caries. This study aims to determine the knowledge of 4th and 5th grade students of SDN Bulu Sugihwaras Bojonegoro regarding dental caries after being given counseling using Dental Monopoly media. The use of Dental Monopoly media is an effort to provide dental health education to children using a game method.*

*The purpose of this study was to determine the knowledge of dental caries using Dental Monopoly media for 4th and 5th grade students of SDN Bulu Sugihwaras Bojonegoro in 2025.*

*The target population for this descriptive study design is 36 students. A questionnaire is used as a measuring tool in this study to ascertain students' understanding of dental caries, including its definition, causes, prevention, effects, and treatment. The average is calculated as a percentage and displayed in tabular form using data analysis.*

*The results showed that the students' level of knowledge about the meaning, causes, prevention, consequences, and treatment of dental caries was in the good category, with an average score of 88%. The conclusion of this study is that the level of knowledge about dental caries using Dental Monopoly media in 4th and 5th grade students of SDN Bulu Sugihwaras Bojonegoro is in the good category.*
