PENGETAHUAN TENTANG PEMELIHARAAN KESEHATAN GIGI
DENGAN MEDIA *TRUTH OR DARE* PADA SISWA KELAS VI DI SDN
KEDURUS III SURABAYA

15x+ 42 Halaman+ 6 tabel + 8 lampiran

Anak-anak di tingkat sekolah dasar sangat rentan mengalami masalah medis, terutama yang berkaitan dengan kebersihan mulut dan gigi. Secara umum, kondisi kebersihan mulut dan gigi rata-rata siswa di tingkat sekolah dasar sangat buruk sebab siswa tak mempunyai wawasan dan kemampuan di mana diperlukan menjaga kebersihan mulut serta gigi mereka dengan baik. Berdasarkan survey awal di SDN Kedurus III Kota Surabaya memperlihatkan rata-rata OHI-S 3.1 yang berada di kategori buruk. Permasalahan di pengkajian ini yakni buruknya nilai kebersihan gigi anak-anak sekolah dasar di SDN Kedurus III Surabaya siswa kelas VI. Pengkajian ini bertujuan agar mengetahui wawasan mengenai pemeliharaan kesehatan gigi lewat media *truth or dare* pada siswa kelas VI di SDN Kedurus III Surabaya. Metode pengkajian ini yakni dengan jenis pengkajian deskriptif lewat jumlah subjek sejumlah 38 siswa kelas VI. Penghimpunan data didapat dari pengisian kuisioner *pre-test* dan *post-test*. Teknik analisa data di pengkajian ini memakai analisis deskriptif di wujud *presentase*. Temuan pengkajian ini yakni ditemukan yakni wawasan pemeliharaan kesehatan gigi sebelum menggunakan media *truth or dare* di SDN Kedurus III Surabaya termasuk dalam kategori kurang. Sedangkan pengetahuan pemeliharaan kesehatan gigi setelah menggunakan media *truth or dare* di SDN Kedurus III Surabaya tergolong kategori baik.

Kata Kunci: Pengetahuan, Pemeliharaan kesehatan gigi, Media *truth or dare*, siswa kelas VI

STUDENTS' KNOWLEDGE ON DENTAL MAINTENANCE THROUGH
TRUTH OR DARE MEDIA AMONG SIXTH GRADERS AT SDN KEDURUS
III SURABAYA.

15x + 42 Pages + 6 Tables + 8 Appendices

Elementary school children are particularly vulnerable to medical issues, especially those related to oral and dental hygiene. In general, the oral hygiene condition among elementary school students tends to be poor, primarily due to a lack of adequate knowledge and skills required to maintain proper oral and dental health. A preliminary survey conducted at SDN Kedurus III in Surabaya revealed an average OHI-S (Oral Hygiene Index-Simplified) score of 3.1, which falls under the poor category. The problem addressed in this study is the low level of dental hygiene among sixth-grade students at SDN Kedurus III Surabaya. This research aims to assess students' knowledge of dental health maintenance using the "Truth or Dare" educational media among sixth-grade students at SDN Kedurus III Surabaya. This study employed a descriptive research design, involving a total of 38 sixth-grade students as respondents. Data were collected through the administration of pre-test and post-test questionnaires. The data analysis technique used in this study was descriptive analysis presented in the form of percentages. The results indicated that prior to the intervention using the "Truth or Dare" media, students' knowledge regarding dental health maintenance was categorized as low. Following the intervention, a significant improvement was observed, with students' knowledge levels falling into the good category.

Keywords: Knowledge, Dental health maintenance, Truth or Dare media, Sixth grade students
