MOTIVASI PEMASANGAN GIGI TIRUAN PADA LANSIA DENGAN KEHILANGAN GIGI (Di Posyandu Nusa Indah 1 Kalijudan Surabaya)

xvi + 54 Halaman + 7 Tabel + 12 Lampiran

Kelompok lanjut usia terdiri dari individu berusia 60 lebih umumnya mengalami berbagai permasalahan kesehatan, terutama kesehatan gigi dan mulut. Keadaan gigi tidak lagi berada di posisi normalnya di rongga mulut, termasuk gigi yang rusak hingga tidak lagi berfungsi, disebut kehilangan gigi. Motivasi termasuk faktor utama yang mempengaruhi tindakan seseorang dalam merawat kesehatan gigi dan mulut, termasuk dalam proses pemasangan gigi tiruan. Masalah penelitian ini rendahnya motivasi pada lansia saat memasang gigi tiruan..

Tujuan penelitian untuk mengetahui hubungan antara motivasi lansia dalam pemasangan gigi tiruan dengan tingkat kehilangan gigi di Posyandu Lansia Nusa Indah 1 Kalijudan Surabaya. Dalam penelitian ini, desain cross-sectional digunakan dengan melibatkan 37 lansia yang dipilih menggunakan metode pengambilan *random sampling*. Intrusmen pengumpulan data menggunakan lembar kuesioner serta pemeriksaan gigi hilang, kemudian memanfaatkan uji *Spearman* untuk analisis.

Hasil penelitian menunjukkan bahwa terdapat nilai signifikansi $p = 0,004$ ($p < 0,05$) maka p value $< 0,05$. Hasil memaparkan motivasi lansia diperoleh *mean ± std. Deviation* (3,35±0,949), sedangkan kategori kehilangan gigi lansia *std. Deviation* (2,24±0.830). Kesimpulan dari penelitian ini adalah ada keterkaitan kuat antara motivasi pemasangan gigi tiruan dengan kehilangan gigi yang dialami lansia di Posyandu Lansia Nusa Indah 1 Kalijudan Surabaya.

MOTIVATION FOR DENTURE INSTALLATION IN EDERLY PEOPLE REGARDING TOOTH LOSS (At The Nusa Indah 1 Kalijudan Surabaya Elderly Posyandu)

xvi + 54 Pages + 7 Tables + 12 Appendices

The elderly group, consisting of individuals aged 60 and over, generally experiences various health problems, particularly dental and oral health. Teeth that are no longer in their normal position in the oral cavity, including teeth that are damaged to the point of no longer functioning, are called tooth loss. Motivation is a major factor influencing a person's actions in maintaining oral health, including the process of installing dentures. This research problem concerns the low motivation among the elderly regarding the installation of dentures.

The purpose of this study was to determine the relationship between the motivation of the elderly in installing dentures and the rate of tooth loss at the Nusa Indah 1 Kalijudan Elderly Health Post (Posyandu Lansia) in Surabaya. This study used a cross-sectional design involving 37 elderly people selected using a random sampling method. Data collection instruments used questionnaires and examinations for missing teeth, followed by the Spearman test for analysis.

The results showed a significance value of $\rho = 0.004$ ($\rho < 0.05$), meaning the ρ value < 0.05 . The analysis of elderly motivation obtained was the mean \pm std. Deviation (3.35 ± 0.949), while the category of tooth loss in the elderly had a standard deviation (2.24 ± 0.830). This study concludes that there is a strong correlation between the motivation to install dentures and tooth loss experienced by the elderly at the Nusa Indah 1 Kalijudan Surabaya Elderly Health Post.
