PPE USE BEHAVIOR OF WELDING SECTION WORKERS IN UD DUAS
YOUTH WORKSHOP IN 2025

xv + 103 Pages + 13 Tables + 5 Attachments

Personal protective equipment (PPE) is special equipment designed to protect workers from various types of workplace accidents, such as physical injuries, occupational diseases, and other accidents that can endanger their health and safety. The type of research conducted is descriptive. The purpose of this study was to determine the occupational safety behavior demonstrated by workers in the welding section of UD Youth Las. The total number of samples used for this study was 16 people, consisting of all employees of UD Boys' Workshop Las. Knowledge, attitudes, and actions regarding the use of welding PPE were variables in this study. The results showed that 43.8% of employees had fairly good actions, 81.25% of employees had good attitudes, and 75 percent of employees had good knowledge. It can be concluded that the behavior of workers in the welding section of UD Las Putra Remaja mostly had good behavior.
