**FACTORS RELATED TO NOT OWNING A latrine in WUKIRHARJO VILLAGE,
PARENGAN DISTRICT, TUBAN REGENCY IN 2022**

X + 57 pages + 17 tables + 18 attachments

Family latrines are facilities for the disposal of feces or human waste, residents must maintain environmental health so that they can improve the health of the population more optimally. The aim of the study was to determine the lack of latrines in Wukirharjo Village, Parengan District, Tuban Regency in terms of predisposing factors, enabling factors, and reinforcing factors.

This research is a descriptive study describing predisposing factors, enabling factors, and driving factors with the relationship of not having a latrine in Wukirharjo Village, Parengan District, Tuban Regency. This study uses a survey method with a questionnaire sheet tool which aims to collect data on the lack of latrines in Wukirharjo Village, Parengan District, Tuban Regency and the factors that cause latrine ownership in Wukirharjo Village, Parengan District, Tuban Regency.

The results showed that most of the respondents did not have a latrine. Then the results of the analysis show that the predisposing factors include knowledge and attitudes. Knowledge of 59.4 which indicates that it is not good as well as the attitude which indicates that it is not good is the cause of 62.8. Enabling factors include the distance of the house to the river and fields. Pointing out that the closer the respondent's house is to the river, the more respondents open defecation, which is <1 meter. The driving factors include the role of health workers and the role of community leaders. The results of the study show that the role of community leaders has played a good role, namely 64, 1. And there are results of the role of health workers who play a good role, namely 59.4. From this research, it can be concluded that predisposing factors, enabling factors, and driving factors are very influential on the lack of latrine ownership in Wukirharjo Village, Prengan District, Tuban Regency.
